

## UNIFIED IDENTITY AND ACCESS MANAGEMENT FOR PHYSICAL AND LOGICAL SYSTEMS

EntryPoint is an access management platform designed for enterprises using high-assurance identity credentials such as PIV, CIV, and CAC cards. EntryPoint uniquely combines identity registration, vetting, work-flows, and system provisioning into a single, web-based platform.

EntryPoint's full life-cycle capabilities allows enterprises to create and manage privileges in a streamlined, efficient, and consistent manner while maintaining and enforcing security processes and controls.

**BOTTOM LINE: EntryPoint Increases Security and Reduces Cost**

### KEY CAPABILITIES AND BENEFITS

#### Combine Logical and Physical Access in Single Platform

EntryPoint is the only PIV solution to combine physical and logical access management for access to networks and buildings

#### Role-Based Privilege Management and Workflows

Using EntryPoint, customers can map their business roles and processes to EntryPoint using the same existing terminology.

#### Visitor Management

Approve, intake, and track facility visitors with features such as web per-registration, vetting, and credential issuance.

#### Credential Management

Issue and manage a wide variety of credentials, including CIV cards and PVC visitor media.

#### Deploy to Building, Campus, or Across the Enterprise

EntryPoint's service-based architecture allows customers to centrally manage and operate geographically diverse facilities any level within the organization.

#### Manage Anywhere with Web-Based Platform

The EntryPoint management portal allows operators and administrators to manage identities and access from any web browser.

#### FICAM Compliant

EntryPoint is FICAM approved by GSA to ensure the highest level of standards compliance and interoperability.

# EntryPoint

## Web Portal

EntryPoint portals provide administrators a convenient and accessible means to administer the system. Users may be added, updated, or deleted, as well as approval workflows managed.

Additionally, the portal allows for person per-registration, which reduces operator input time, decreases distribution of personally identifiable information (PII) and allows the person data to be stored once.

USERS AND THE ENTRYPPOINT SYSTEM CAN BE OPERATED ON WITH ANY WEB BROWSER

## PACS and LACS Provisioning

EntryPoint will seamlessly provision identity credentials to a variety of target systems such as Active Directory and Physical Access Control Systems from leading companies such as Software House, Amag, and Lenel.

## Visitor Management

EntryPoint has an end-to-end visitor management capability which starts with pre-registration, vetting, approvals, and finally visitor check-in and badge issuance. Visitors may be strongly bound to authorized sponsors and

Additionally, EntryPoint can be configured for kiosk operations to allow for self-service in lobby environments

## Card Management

EntryPoint has the ability to issue and manage multiple types of credentials, including CIV cards. CIV cards are similar to PIV-I cards, and they provide agencies with an inter-operable access media for their PIV infrastructure.
